

Mansoura University  
Faculty of Pharmacy  
Professional Master of Immunology  
and Regenerative Medicine

جامعة المنصورة  
كلية الصيدلة  
برنامج الماجستير المهني في  
المناعة والطب التجديدي

### \* Program Objectives :

-To graduate practitioners and researchers capable of acquiring the scientific and technical skills to control cell manipulation in the laboratory and provide suitable and safe conditions for cell transplantation to patients. This will have a positive impact on human health and community development, as well as the ability to develop various medical drugs and their effects on human cells, including stem cells, both in vitro and on patients. This will positively impact production and drive economic growth. Furthermore, it will provide a sound scientific foundation for research at the university.

-To promote open and distance learning to make study accessible to a wider range of researchers globally.

-To attract postgraduate students and facilitate cultural and scientific exchange with Nile Basin countries, African nations, and Middle Eastern countries.

-To prepare internationally trained personnel capable of implementing distance learning systems in various scientific fields.

-To develop the self-generated resources of the college and the university.

### \* Degree Awarded

The Mansoura University Council, upon the request of the Faculty of Pharmacy Council, awards a Professional Master's degree in Immunology and Regenerative Medicine, taught in French and English, using a credit-hour system.
